#### **DETAILED ACTION**

Application has been examined. The original claims 1-10 are pending. The examination results are as following.

### **Drawings**

1. Figure 5 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

# Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prior Art figures 5 and 6 admitted by Applicant in view of Yamada et al. (US patent 6,072,450).

Prior Art Figures 5-6 disclose that a digitizing apparatus for obtaining coordinate information (14), and display control circuit (13) for displaying an image on the display by determining timing if horizontal scanning and vertical scanning. However, figures 5-6 do not disclose that a digitizing comprising a light emitting display device having a plurality of display pixels disposed in a matrix and a detector in contact with the display surface of the display device, wherein the plurality of display pixels to emit light.

Application/Control Number: 09/672,943

, 'Art Unit: 2674

Yamada et al. disclose in figures 7 and 16 a light emitting display device having a plurality of display pixels (EL element 3) disposed in a matrix and a detector in contact with the display surface of the display device, wherein the plurality of display pixels to emit light (see column 10, lines 48-67). Furthermore, Prior Art figures 5-6 disclose that a digitizing processing circuit for generating coordinate information on the basis of change in detection output of the pen with respect to timing of display, a display control circuit (13). It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize the teaching as taught by Yamada et al. using the light emitting display device having a plurality of display pixels in the device as Prior Art of figures 5-6 because this would emit light at the luminance according to the applied voltage.

# Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 4-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prior Art figures 5-6 admitted by Applicant in view of Yamada et al. (US patent 6,072,450) as applied to the claims 1-3 above, and in view of Tomio et al. (US patent 5,745,085).

Claims 4-10, which is dependent upon claim 3, and includes the same claimed element of claim 3, and is rejected on the same reasons set forth in claims 1-3. Furthemore, Prior

Application/Control Number: 09/672,943

'Art Unit: 2674

Art figures 5-6 and Yamada et al. do not disclose that wherein the electroluminescence display comprises a horizontal driver circuit for applying a voltage to each column of the plurality of display pixels at the timing of horizontal scanning; and a vertical driver circuit for driving the plurality of display pixels in row units at the timing of vertical scanning. Tomio et al. disclose in figure 1 electroluminescence display comprises a horizontal driver circuit (31) for applying a voltage (39) to each column of the plurality of display pixels at the timing of horizontal scanning; and a vertical driver circuit for driving the plurality of display pixels in row units at the timing of vertical scanning (see figure 1, column 7, lines 60-67 and column 8, lines 1-18). It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize the teachings as taught by Tomio et al. for applying a voltage at the timing of horizontal scanning and vertical scanning in the device as of Prior Art figures 5-6 and Yamada et al.'s system because this would control the current which increases the turn-on display rate of the cell portion and detect the current flowing into the cell portion.

### Correspondence

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kimnhung Nguyen whose telephone number (703) 308-0425.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, RICHARD A HJERPE can be reached on (703) 305-4709.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, D. C. 20231

`Art Unit: 2674

## Or faxed to:

(703) 872-9314 (for Technology Center 2600 only).

Hand-delivery response should be brought to: Crystal Park II, 2121 Crystal Drive, Arlington, VA Sixth Floor (Receptionist).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Technology Center 2600 Customer Service Office whose telephone number is (703) 306-0377.
